DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 6 and 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 6 recites the broad recitation room temperature to 150° C, and the claim also recites preferably from

Application/Control Number: 10/511,157

Art Unit: 1621

100 to 145° C, particularly preferably from 135 to 140° C which is the narrower statement of the range/limitation.

Claim 7 recites the broad recitation 1 to 150 hours, and the claim also recites preferably from 10 to 25 hours, particularly preferably from 18 to 22 hours, which is the narrower statement of the range/limitation.

Claims 12 and 13 provide for the use of the salts of bis(perfluoroalkyl)phosphinic acids according to claim 10, as ionic liquids, but, since the claims do not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 12 and 13 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 10/511,157

Art Unit: 1621

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 10 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Pavlenko et al (J. Gen. Chem. USSR, 1989).

Pavlenko et al disclose the quarternary salt, IX (p 474), and the salt, triethymethylammonium bis(heptafluoropropyl) phosphinate, compound X (p 476). These compounds anticipate the instant claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kovaleva et al (J. Gen. Chem. USSR, 1990).

The instant claims are drawn to a process for preparing
bis(perfluoroalkyl)phosphinic acids or salts thereof by reacting a
difluorotris(perfluoroalkyl) phosphorane or a trifluorobis(perfluoroalkyl) phosphorane
with hydrogen fluoride. The salt of said phosphinic acid is prepared by neutralization.

Koraleva et al teach a process for preparing perfluoroalkylphosphinic acids by reacting tris(perfluoroalkyl)difluorophosphorane in aqueous sodium hydroxide with hydrochloric acid at 120-140° C for over 40 minutes (p 2247).

The difference between Kovaleva et al and the instant claims is that Kovaleva et al teach the use of hydrochloric acid, as opposed to the hydrofluoric acid (hydrogen fluoride) employed in the present process.

However, the examiner contends that a person of ordinary skill in the art would expect the two different hydrogen halides to behave similarly in such a reaction.

Therefore, it would have been obvious to a person of ordinary skill in the art to substitute hydrochloric acid for hydrofluoric acid (or hydrogen fluoride) by the desire to employ a less volatile reagent in the process.

Information Disclosure Statement

The information disclosure statement filed October 14, 2004 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered, with the exception of the references that the examiner was able to obtain copies of.

The examiner requests that applicants in responding to this Office Action include an amendment to the specification adding the continuing data.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sikarl A. Witherspoon whose telephone number is 571-272-0649. The examiner can normally be reached on M-F 8:30-6:30.

Art Unit: 1621

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thurman Page can be reached on 571-272-0602. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
